

B1

14. (new) A method for generating content addressable video, comprising:
displaying a content video image representative of an organization of content
addressable video, the content video image having positions within the content video image
corresponding to desired content of video images to be displayed;
selecting with data processing resources positions within the content video image;
executing program steps with data processing resources which generate control signals
indicating a content for a video image in response to the selected positions within the content video
image;
generating video data in response to the control signals, the video data defining one or
more video images having the content indicated by the control signals; and
executing program steps with data processing resources which associates the video
images in the video data with positions in the content video image.

15. (New) An apparatus for generating content addressable video, comprising:
a content image display which displays a content video image representative of an
organization of content addressable video, the content video image having positions within the content
video image corresponding to desired content of video images to be displayed;
a controller, in communication with the content image display, which generates
control signals indicating content for video images in response to respective positions within the
content video image; and
controllable image generator, responsive to the control signals, which produces video
images in response to video image data indicated by the control signals corresponding to respective
positions in the content video image.
